💡 LED LIGHTING

OPTION DESCRIPTION: Ore LED Lighting provides a striking design element along the edges of our containers. We offer three different ORE LED applications. The Face LED option consists of an acrylic piece installed in the face of a container. An LED housing and transformer are hidden beneath a fully sealed planting compartment (transformer available upon request). The Lip LED provides attractive lighting at the top lip of the container. The Toe-Kick LED option provides LED lighting behind the container face, projecting light from below.

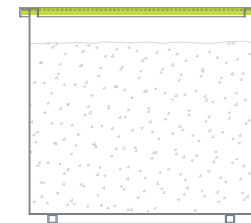

Our LED strips are waterproof and ready for year-round exterior use. Lights may be installed on a single side or multiple sides. Please note that these installations are compatible with other functional options such as irrigation sleeves, drainage fittings, casters, and adjustable feet. To determine which containers are compatible with the LED option, look for this icon in our catalog and specification sheets.
